

Race Fuels

Warter | Racing

QUALITY ENDURENCE PASSION

Across sports cars, single seaters, motorcycle racing and further afield, the Gulf brand is associated with winning, whatever the discipline.

Gulf Race Fuels now aspires to take its offer to other global markets, via a dedicated blending facility in Europe. Race, rally, aftermarket and historic fuels are now all available, with each product tailored to the unique requirements of the specific discipline.

GULF RALLY

Our uniquely formulated fuel helps to provide increases in power and performance for both turbocharged and naturally aspirated engines. Furthermore, the fuel meets the most stringent of requirements such as FIA certification and appendix J compliance, allowing it to be used throughout all rally disciplines.

Most important features:

- developed without compromise provides significant power increases in a range of different applications
- dedicated for turbocharged engines. Optimized for R5 category cars. FIA 2020 compliant
- requires specific engine mapping and tuning

Product availability: drums 50L.

„I'm happy with the performance of the fuel this weekend and can tell instantly it's having a good effect on the engine. I

t's great to be working with such an established brand in motorsport like Gulf Race Fuels and i'm excited to see what we can achieve, throughout the championship."

- Jari Huttunen

GULF RACING 102

Our 102 formula is a consistent and reliable fuel that provides an increase in performance across many different applications. The fuel can also be used at all levels of motorsport from professional to amateur as it is both FIA and Motorsport UK compliant.

Most important features:

- developed without compromise provides significant power increases in a range of different applications
- FIA 2020 compliant
- dedicated for turbocharged engines

Product availability: drums 50L.

GULF RACING 116

Gulf 116 is a leaded, non-oxygenated fuel designed for supercharged, turbocharged and nitrous applications. The high-quality and consistent fuel provides superior detonation protection at all levels.

Most important features:

1. leaded fuel. Best suited for drag racing applications where oxygenated fuels are permitted
2. high increase of horsepower and torque gains compared to other leaded fuels
3. requires specific engine mapping and tuning

Product availability: drums 50L.

GULF MAX 116

Gulf Max 116 is a leaded, oxygenated fuel that increases power for both turbocharged and naturally aspirated engines. The formula directly increases both horsepower and torque by providing superior detonation protection and ensuring optimal performance which could be the ultimate competitive difference.

Most important features:

1. leaded fuel. Best suited for drag racing applications where oxygenated fuels are permitted
2. high increase of horsepower and torque gains compared to other leaded fuels
3. requires specific engine mapping and tuning

Product availability: drums 50L.

GULF PERFORMANCE PLUS

Gulf Performance Plus is arguably the most versatile fuel on the market. Its highly oxygenated formula produces extreme power increases for both turbocharged and naturally aspirated engines. Fuel choice is critical to vehicle set-up and can be the difference between podium and the rest of the pit lane. Gulf Performance Plus is the perfect formula for competitors in race series that have flexible fuel specs – providing the opportunity for a competitive advantage.

Most important features:

1. most powerful unleaded fuel
2. the high octane and oxygen content fuel will allow your engine's ECU to auto-map and take advantage of the full performance.
3. blended from different components containing outstanding energy content.

Product availability: drums 55L.

UNSTOPPABLE QUALITY

The Warter Racing fuel production process is based on a production line which, thanks to the implemented control systems, allows the creation of the highest quality fuel.

Moreover, all fuel components are manufactured by our refinery, which allows us to track and control the whole production process. Thanks to that we are able to create a product that is fully repeatable.

WARTER RACING FUELS 102

New, professional racing fuel for R5 and R3 class cars. The most powerful, meeting the FIA standards regulations. This gasoline has been specially developed and improved for new generation engines with direct fuel injection.

Product availability: drums 18L, 53L.

WARTER

RACING FUELS 102+

Warter Racing 102+ is a fuel with high-performance parameters, which have been confirmed by tests carried out on the race track and a dynamometer designed for tuning sports engines. It is a product recommended for racing teams focusing on high quality and excellent parameters at an attractive price. Each fuel type is subjected to appropriate tests. Our gasoline goes on sale only after meeting a number of requirements of technical conditions.

Warter Racing 102+ high-octane fuel meets the highest quality and performance standards.

Product availability: drums 53L.

WARTER RACING E85R

Warter Racing Fuel E85 purchased at petrol stations can contain from 68% to 79% ethanol, and the mixture varies according to the season. When buying the Warter E85R you can be sure of 100% repeatability of fuel composition.

Due to the exceptionally high oxygen content, we recommend to calculate an increase in fuel consumption of up to 40% compared to traditional petrol.
